

INDUSTRY INTERNSHIP SUMMARY REPORT

GenC-Next Internship at Cognizant

Project: Skill-Based Task Allocation System

AVI JAIN

Admission No: 22SCSE1410010

OVERVIEW

Internship at a Glance

Company

Cognizant Technology Solutions

Role

Programmer-Analyst Intern

Domain

Quality Engineering & Assurance
(QEA-SDET)

Duration

17 Feb 2026 – 12 Jun 2026

WHY THIS PROJECT

The Problem We Solved

In any team, a manager must decide who should handle each new task. When this is done by hand, it is slow and easy to get wrong.

Result: delayed delivery, uneven workload, and lower quality.

Human bias

The best-fit person is often overlooked.

Uneven workload

Top performers get overloaded.

Wrong fit

Work goes to someone lacking the skill.

THE SOLUTION

Skill-Based Task Allocation System

An app that automatically assigns each task to the right person.

It matches the skills a task needs with the skills an employee has.

Stores employee skill profiles

Records the skills each task requires

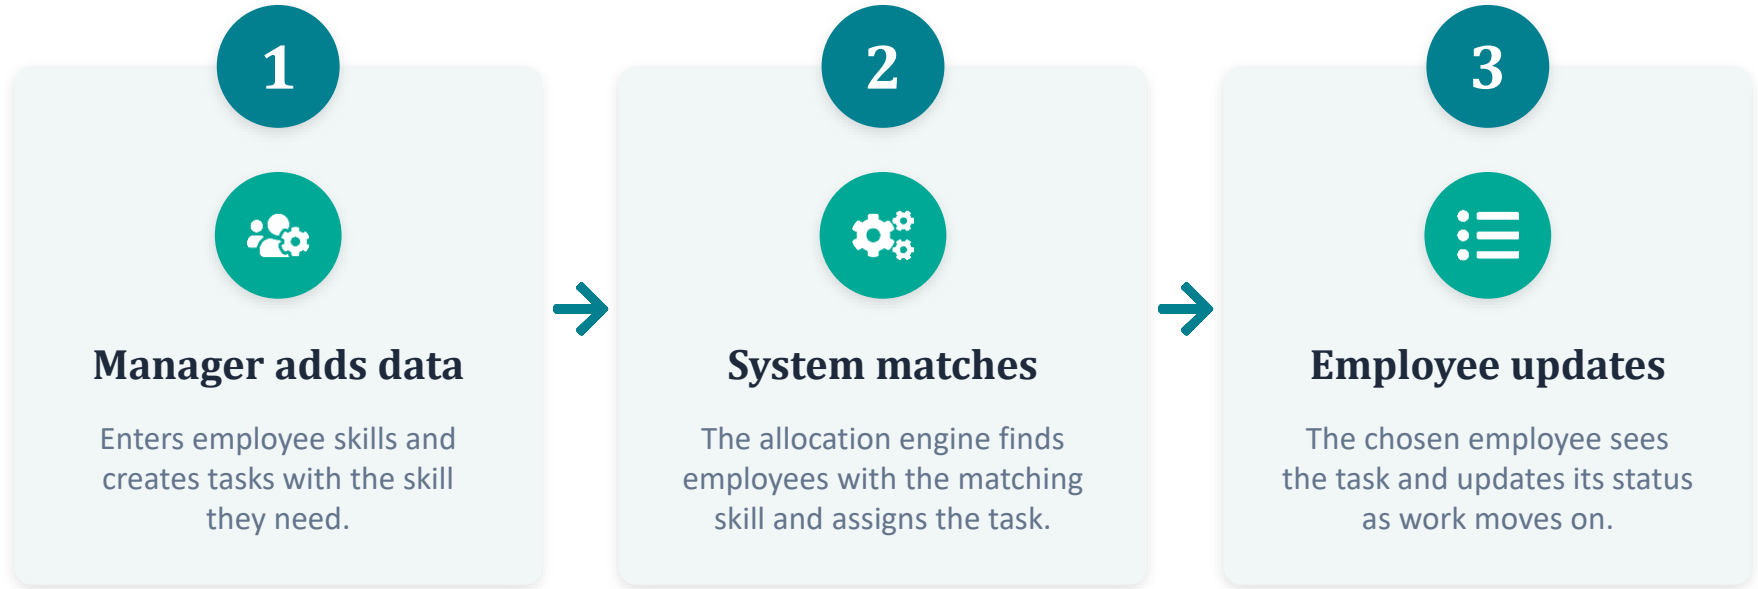

Auto-matches and assigns the best person

Replaces manual guesswork with fair rules

SIMPLE 3-STEP FLOW

How It Works

WHAT THE SYSTEM DOES

Main Features

Skill & Employee Management

Add, edit and store employee profiles and their skills.

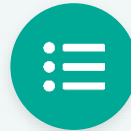

Task Management

Create tasks with the required skill and track their status.

Allocation Engine

The core: match skills and assign tasks to the right person.

Status Tracking

Employees update progress; managers stay informed.

Technologies Used

Java + Spring Boot

Server side — business logic & REST API

Angular

Front end — the user interface

SQL Database

Stores employees, skills and tasks

Selenium + Cucumber

Automated testing of the app

GitHub + Jenkins

Version control & automatic builds

HOW THE INTERNSHIP WAS ASSESSED

Evaluation Process

Cognizant assesses interns with a Qualifier test and a Red–Amber–Green (RAG) status, where Green means a fully satisfactory result.

83/100

Qualifier

Pass mark was 70 — cleared comfortably.

GREEN

Interim (RAG)

Satisfactory status at the mid-point.

GREEN

Final (RAG)

Achieved on the first attempt.

KEY TAKEAWAYS

Skills I Learned

Full-Stack Development

Building both front end and back end.

Automated Testing

Writing tests with Selenium & Cucumber.

Version Control & CI

Daily use of GitHub and Jenkins.

Agile Teamwork

Working in two-week sprints with a team.

Debugging

Finding and fixing problems systematically.

Reading Requirements

Turning needs into working features.

CONCLUSION

A real problem, solved end-to-end.

Built and delivered a working Skill-Based Task Allocation System.

Achieved Green status at both interim and final evaluations.

Gained real, employable industry skills and a test-first mindset.
